.NET | Microservices | Generative AI | Azure | Technical Leadership

EXECUTIVE SUMMARY

Full-Stack .NET and Salesforce Professional with 15 years of experience delivering enterprise solutions, global transformation programs, and legacy modernization across BFSI, Insurance, and IT Services. Proven track record in Solution Architecture, Microservices, Generative AI integration, and Cloud Adoption. Adept at leading cross-functional teams, optimizing revenue systems, and driving automation with measurable business outcomes.

Career Highlights:

- **Global Transformation Lead** – Delivered client instructions, billing, and pricing platform for a global claims company
- Implemented **Generative AI** with .NET (Azure OpenAI, LangChain) to automate document processing
- **Legacy Modernization Expert** – Migrated Lotus Notes apps → SQL Server → Salesforce with **100% data accuracy**.
- **Team Leadership** – Mentored cross-functional teams in Salesforce & .NET, enforcing best practices, code quality, and security.

TECHNICAL & FUNCTIONAL SUMMARY:

.NET & Backend

- **Languages/Frameworks:** C# (v8.0+), ASP.NET MVC, Web API,React
- **.NET Core / .NET 6+:** Cross-platform applications, enterprise APIs, cloud readiness
- **Microservices Architecture:** RESTful APIs, containerization (Docker/Kubernetes), service discovery, API Gateway
- **Database:** SQL Server 2019/2022, SSRS
- **Data Access:** Entity Framework Core, ADO.NET, LINQ, SQL Server optimization
- **Architecture Patterns:** Layered, Clean Architecture, Domain-Driven Design (DDD)
- **DevOps/Cloud:** Azure DevOps, CI/CD pipelines, GitHub Actions
- **Generative AI: Azure OpenAI, Semantic Kernel and LangChain for .NET, RAG, AI API integration**

PROFESSIONAL EXPERIENCE

Development Tech Lead | Primus Software India | Jan 2018 – Nov-2025

- Led enterprise-wide modernization and revenue transformation for a global insurance client
- Architected microservices in .NET Core & Salesforce integrations, improving API response time by 40%.
- Implemented Azure DevOps pipelines and GitHub Actions, reducing deployment cycles by 30%.
- Spearheaded data migration (Lotus Notes → Salesforce), achieving 100% accuracy across 1M+ records.
- Mentored 12+ developers, enforcing quality and security via SonarQube & PMD.

Sr. .NET Developer | Nominate IT Solutions, Australia | Dec 2016 – Dec 2017

- Developed REST APIs & enterprise modules in .NET for Australian clients.
- Improved performance of critical apps through SQL optimization and microservices refactoring.

Sr. .NET Developer | CIPL, Delhi | Jun 2014 – Aug 2016
Sr. .NET Developer | SIL, Delhi | Aug 2011 – May 2014
Software Developer | Webtech4rindia, Delhi | Jan 2010 – Aug 2011

PROFESSIONAL QUALIFICATIONS:

- MCA from IGNOU, New Delhi
- BCA from IGNOU, New Delhi

EDUCATIONAL QUALIFICATIONS:

- HSC (12th) from B.I.E.C, Patna
- SSC (10th) From B.S.E.B, Patna

PROJECTS:

Primus Software India | [Noida] | [01/2021] – Present

1. Pricing & Rules Management Service

Environment: .NET 6, SQL Server 2022, Azure Functions, Docker/Kubernetes

Role: Technical Lead | **Team Size:** 12 | **Duration:** 6 Month

Description:

A Service-based solution developed to define, manage, and apply dynamic pricing rules across global regions for an insurance and claims management organization. The system centralizes pricing governance, ensures rate accuracy, and automates manual processes.

Responsibilities:

- Designed the rate engine and pricing framework using Apex classes and Lightning Web Components.
- Integrated Salesforce with backend APIs for real-time pricing updates.
- Implemented batch processing for large-scale rate calculations.
- Enforced code quality and secure coding standards via **SonarQube** and **PMD**.

Technologies: C# .NET Core, REST API, SQL Server, Salesforce API, Azure DevOps, Application Insights

---

2. Client Instruction Management

Environment: Salesforce (LWC, Apex, SOQL/SOSL, Platform Events)

Role: Technical Lead | **Team Size:** 12 | **Duration:** 18 Months

Description:

A Salesforce-based application to manage client contracts and instructions across multiple business units. The solution streamlines scope definition, approval workflows, and delivery tracking to improve transparency and SLA compliance.

Responsibilities:

- Developed modular LWC components for the complete instruction lifecycle (Create–Review–Approve–Track).
- Implemented **Platform Events** and **Change Data Capture (CDC)** for real-time synchronization.
- Automated deployments and versioning via **Azure DevOps** and **GitHub Actions** pipelines.

  Technologies: C# .NET Core, REST API, SQL Server, Salesforce API, Azure DevOps, Application Insights

---

3. Consolidated Billing (Serverless Microservice Architecture)

Environment: .NET 6, SQL Server 2022, Azure Functions, Docker/Kubernetes

Role: Technical Lead | **Team Size:** 12 | **Duration:** Ongoing

Description:

A multi-tenant, cloud-native invoicing platform built for a global claims management leader. The application integrates regional billing systems into a unified framework, enabling automated invoice generation and financial reporting.

Responsibilities:

- Architected and implemented microservices for **Instruction**, **Billing Engine**, and **Reporting** modules.
- Developed RESTful APIs using **.NET 6** and **Entity Framework Core**.
- Deployed serverless components on **Azure Functions** with containerization using **Docker** and **AKS**.
- Integrated caching (Redis) and CI/CD automation for scalable, high-performance operations.

Technologies: .NET 6, ASP.NET Core, SQL Server, EF Core, Docker, AKS, Redis Cache, Azure Functions, Azure DevOps

---

4. Legacy Data Migration (Lotus Notes → SQL Server → Salesforce)

Environment: .NET Core, REST APIs, SQL Server, Salesforce API

Role: Technical Lead | **Team Size:** 12 | **Duration:** Completed

Description:

Enterprise-level data migration project modernizing legacy Lotus Notes systems to Salesforce, ensuring complete data integrity and operational continuity.

Responsibilities:

- Developed secure **.NET Core REST APIs** for data extraction, transformation, and migration.
- Designed validation and reconciliation processes to ensure 100% data accuracy.
- Automated Salesforce data import using **Bulk API** and migration utilities.

  Technologies: C# .NET Core, REST API, SQL Server, Salesforce API, Azure DevOps, Application Insights

---

Cross-Project Highlights

- **Architecture:** Microservices, Clean Architecture, Domain-Driven Design (DDD)
- **DevOps:** Azure DevOps, GitHub Actions, CI/CD Automation
- **Cloud & AI:** Azure Functions, Docker, Kubernetes, Azure OpenAI + LangChain Integration
